

Dear Madam or Sir,

I am a senior software engineer with 5+ years of experience, based in Bristol. I am applying to the Software Engineer II role since the job description and Sony's mission resonated with my professional experience and values:

- I have experience creating command-line utilities, graphical user interfaces, and in general, automated tools to improve the productivity of the team.
- I strive to deliver the cleanest software architectural design.
- I always push for the adoption of the latest stable C++ standard.
- I consider developing unit testing as important as the implementation of the core logic.
- I thrive when the team is applying 'SAFe' protocols. Also because I enjoy creating clear designs of the planned work.

Yours faithfully,

Edoardo
